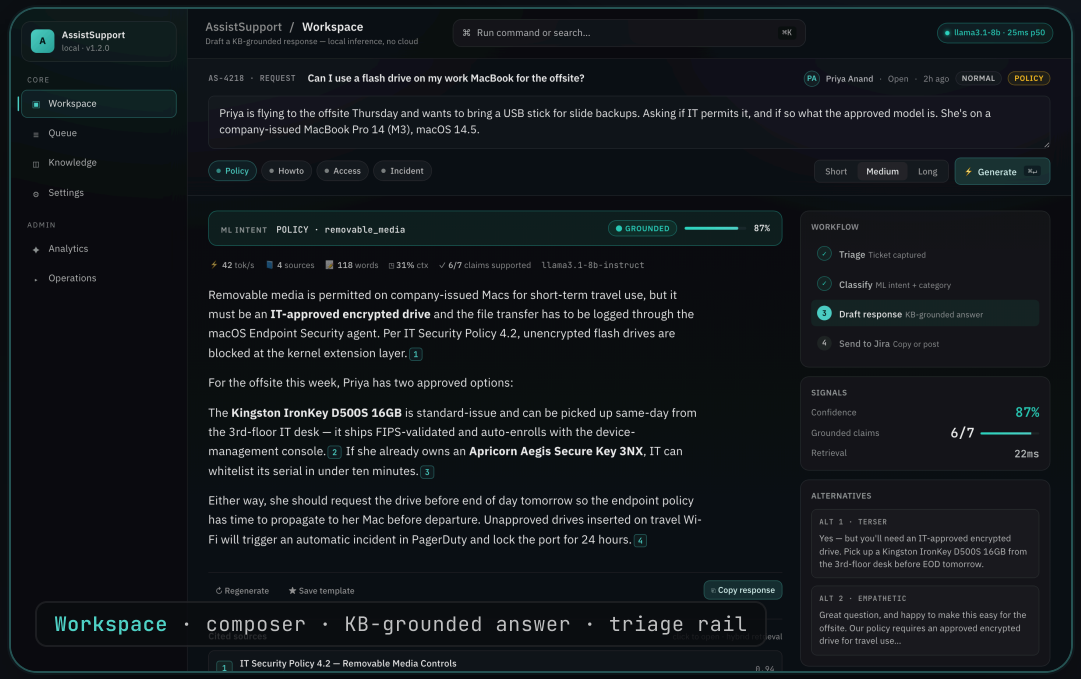
RUNS ON YOUR MACBOOK | TAURI 2 + RUST | PORTFOLIO-GRADE

YOUR SUPPORT TEAM'S SECOND BRAIN

ML-powered answers from your own knowledge base — in under 25 ms, without sending a single query to the cloud.

Local LLM inference plus a hybrid ML search pipeline that drafts accurate, KB-grounded IT support responses entirely on the operator's laptop. SQLCipher AES-256 at rest, a self-improving feedback loop, and an ops surface for deploy, rollback, and eval — all shipped as a single Tauri app.



FIVE FEATURE PILLARS

— local inference · hybrid search · trust-gated · self-improving · encrypted

01 ML intent classification

A calibrated logistic-regression classifier routes every ticket — policy, howto, access, incident — in under 5 ms.

0.914 macro-F1

02 Sub-25 ms hybrid search

TF-IDF retrieval plus a ms-marco-MiniLM-L-6-v2 cross-encoder reranker — citations are real files, not hallucinations.

22 ms p50 · 46 ms p95

03 Trust-gated responses

Confidence modes (answer · clarify · abstain) plus inline [n] citations link every sentence back to its source.

0.93 grounded · **0.96** fai…

04 Self-improving feedback loop

Low-confidence queries get clustered into KB gaps, ranked by impact, and turned into a prioritized list of articles.

14 gap clusters · 87 tic…

05 Local-first & encrypted

SQLCipher AES-256 at rest, local Ollama inference. Zero data leaves the machine. Ships with deploy / rollback / eval ops.

SQLCipher · Ollama · Tau…

TICKET DEFLECTION

25 %

of tier-1 tickets never reach a human — drafts accepted and pasted into Jira as-is.

benchmark: prior Aisera deployment

HYBRID SEARCH LATENCY

<25 ms

p50 across TF-IDF candidate retrieval plus cross-encoder reranker — instant in the composer.

measured on M3 MacBook Pro · eval run #4812

KB ARTICLES INDEXED

3,500 +

local SQLite index of policies, runbooks, how-tos, and incident retrospectives — refreshed nightly.

nightly reindex · 46 s · see Ops surface
